- $D_{soft\,\pi}$&D_{D^0} cancel partially in *DOWN*, but add up in *UP*
- $|A_{CP,D^*}|$ much bigger for the *UP*-polarity

Comparison - $D^*\phi$

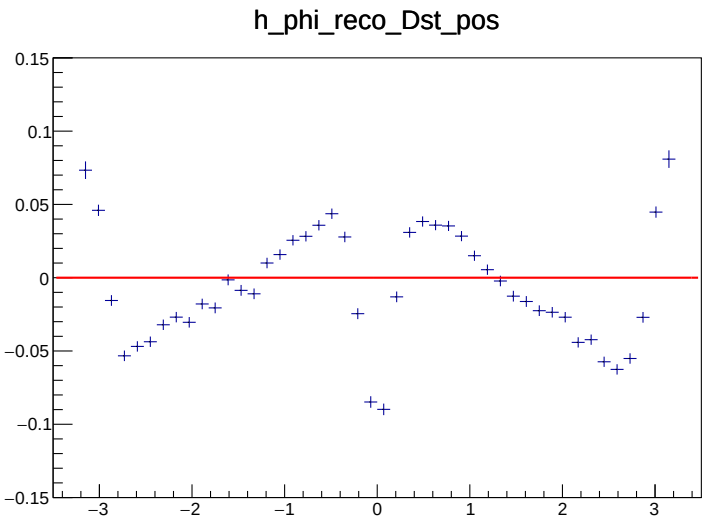
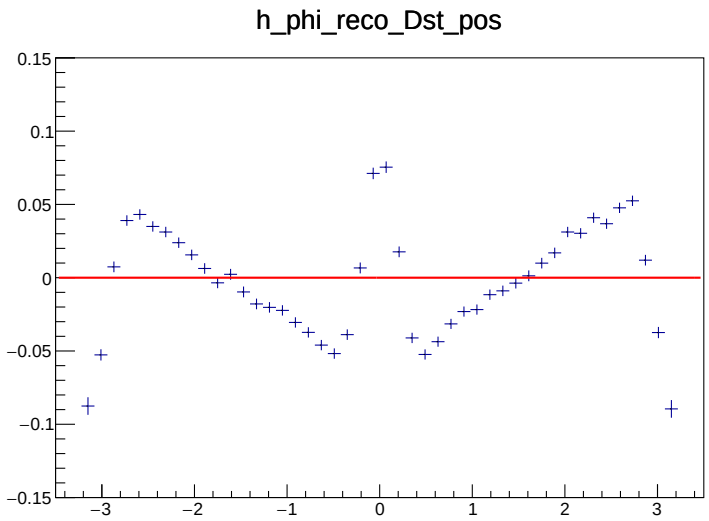
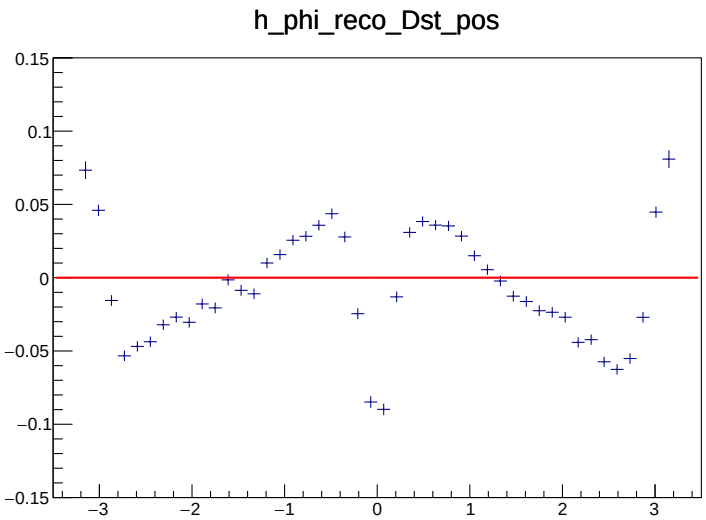
Comparison - $D^*\phi$

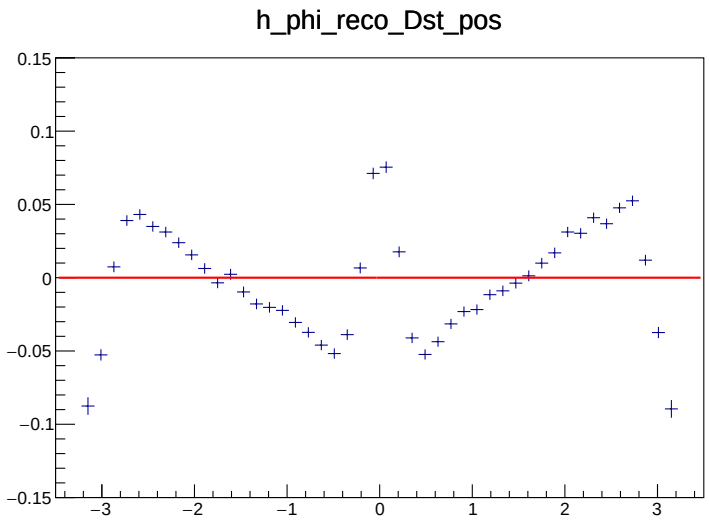




- A_{CP} dependent on direction in the detector
  $\rightarrow$ detector induced CP-asymmetry due to rectangular shape

Comparison - $D^*\phi$





- A_{CP} dependent on direction in the detector
  $\rightarrow$ detector induced CP-asymmetry due to rectangular shape
- add together samples with different magnet polarisation
