

# Detector induced assymetry in CP violation measurements

Eugenia Spedicato, Lina Maria Ortiz Parra, Jonah Blank

March 23, 2020

- normalization ( $N_{tot} = 3 \cdot 10^6$ ) has no measurable effect
- mean origin vertex:
  - UP:  $(0.84 \pm 0.03, -0.18 \pm 0.03, -2.64 \pm 44.56)$
  - DOWN:  $(0.84 \pm 0.03, -0.18 \pm 0.03, -3.14 \pm 37.46)$
- $x$  and  $y$  many  $\sigma$  from 0  
→ asymmetric distribution of particles flying into the detector

# Idea 1

- form of detector: difference in eff. of different charges with  $\pm\phi$
- for  $|\phi| < 0.5$  &  $|\phi| > 2.5$  big differences in reconstruction for both charges  
→ cut these out
