Detector induced assymetry in CP violation measurements

March 23, 2020

- normalization ($N_{tot} = 3 \cdot 10^6$) has no measurable effect
- mean origin vertex:
 - UP: $(0.84 \pm 0.03, -0.18 \pm 0.03, -2.64 \pm 44.56)$
 - **DOWN**: $(0.84 \pm 0.03, -0.18 \pm 0.03, -3.14 \pm 37.46)$
- \blacksquare x and y many σ from 0
 - \rightarrow asymmetric distribution of particles flying into the detector

Idea 1

- \blacksquare form of detector: difference in eff. of different charges with $\pm\phi$
- \bullet for $|\phi|<0.5\&|\phi|>2.5$ big differences in reconstruction for both charges
 - \rightarrow cut these out
